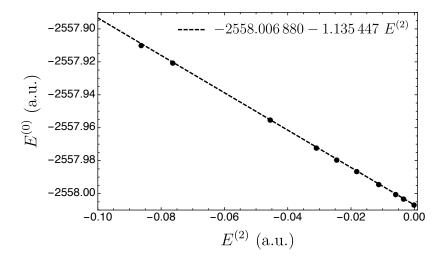

FIG. 1. Extrapolation of the sCI energies to the FCI limit (i.e. $E^{(2)} = 0$) for the ground state of the CuCl₂ molecule obtained with the 6-31G basis set. The last two points (corresponding to the two largest wave functions, that is, having the smallest $E^{(2)}$ values) are taken into account in the linear extrapolation.

TABLE I. Total energies (in hartree) of cyanines for various methods. The error bar corresponding to one standard deviation is reported in parenthesis.

Method	Ground state		Excited state		
	CN3	CN5	CN3	CN5

TABLE II. Zeroth-order energy $E^{(0)}$ and second-order energy $E^{(2)}$ (both in hartree) of the ground and first excited states of CN3 and CN5 as a function of the number of determinants N_{det} in the sCI expansion. The excitation energies (in eV) are also reported. The error bar corresponding to one standard deviation is reported in parenthesis.

Molecule	$N_{ m det}$	Ground state		Excited state		Excitation
